```
set variable (interested in) as values [A], [B], [C]

for each (line) in file network.txt
    set variable (first person) as first item in (line) split by character [-]
    set variable (second person) as second item in (line) split by character [-]
    if (first person) in (interested in) or (second person) in (interested in)
        print (line)
```
